

## Program Handin process

**NOTE** – you will turn your code into the *csc-cpe464* grader account.

You will use the handin process to submit your source code. You will handin your code into the **csc-cpe464** account.

To see available directories use:

```
> handin csc-cpe464
```

As an example if the directory is prog1\_trace...use:

```
> handin csc-cpe464 prog1_trace trace.c util.c Makefile util.h (or whatever files you have)
```

Or even easier:

```
> handin csc-cpe464 prog1_trace *.c *.h Makefile README
```

Remember to handin your .h files and your **Makefile** (and anything else that is needed so all we need to do is type make). To grade your program I should only have to type make and the executable should be created.

Notes:

- When we grade your program we will first type make. If your program does not make (so your Makefile fails) you will receive a 0 and have to get your program regraded (and possibly lose points).
- To see what you have already turned in type (assume for prog1\_trace):

```
> handin csc-cpe464 prog1_trace
```

This command will list the files you have submitted for program 1.
